SUMMARY

An Electronic Engineering Technology undergraduate with a strong foundation in software development, automation, and system architecture. Experienced in utilizing C, SQL, and PowerShell to build efficient workflows and optimize database performance. A team leader with hands-on project management experience.

EDUCATION

Universiti Malaysia Perlis (UniMAP)

Bachelor Of Electronic Engineering Technology | (2022 - Present)

- Expected Graduation: Nov 2026 | CGPA: 3.63

Diploma in Computer Engineering | (2019 - 2022)

- Graduated: 2022

PROFESSIONAL EXPERIENCE

Centific Global Solutions, Inc. (Software Engineer Intern)

(February 2026 - August 2026)

- Engineered PowerShell automation scripts for Microsoft SCCM, leveraging AI tools (GitHub Copilot) to accelerate code development and successfully **reducing** manual execution time by **50%**.
- Executed and managed **1,000+** test cases, utilizing Microsoft SQL Server queries to validate system results and ensure data integrity.
- Provided critical infrastructure support by assisting in SCCM deployment, system validation, and advanced troubleshooting.

CTRM Aero Composites Sdn Bhd (Software Intern)

(January 2022 - April 2022)

- Maintained and optimized the company's front-end architecture using React, JavaScript, HTML5, and CSS to ensure a seamless user experience
- Executed end-to-end API and database validation utilizing Postman and complex SQL queries, ensuring seamless data integration and system reliability.

TECHNICAL SKILLS

Languages:

- C, Python, PowerShell, JavaScript/TypeScript, SQL.

Hardware & Embedded:

- ESP32, Arduino, Microcontroller Programming.

Software Tools:

- LTspice, MATLAB, Microsoft SQL Server Management Studio (SSMS), AzureDevOps, Git, Github, Postman

Cloud & Networking:

- AWS, Google Cloud Platform (GCP), Cisco Routing, OSPF

ACADEMIC PROJECTS

Smart Poultry Habitat (IoT Design Project - Team Leader)

- Led a team in programming an ESP32 microcontroller in C to process real-time environmental sensor data for a smart agriculture system.
- Developed a bidirectional communication pipeline between the embedded hardware and a React Native application to enable remote automated control of the habitat.

Student Mental Well-Being Monitoring System with Analytics

- Directed the end-to-end Agile development of a native health application, implementing iterative testing and continuous integration.
- Designed a data pipeline to continuously synchronize biometric data from wearable smartwatches with a centralized cloud database for real-time analytics.
- Processed collected biometric metrics to generate actionable insights and real-time feedback dashboards for educators and users.

AI-Based Loan Approval System

- Built a machine learning model using Python (Scikit-learn, Pandas) to analyze financial datasets and accurately predict loan default risk.

AI-Powered Construction Safety Monitoring System (Proposal)

- Architected a cloud-integrated safety monitoring solution utilizing AWS Rekognition to automate the detection of required safety equipment on active sites.
- Designed the system infrastructure to ensure real-time compliance monitoring and rapid hazard alerts.

AWARDS / CO-CURRICULUM

- Dean's List for 5 out of 6 semesters during bachelor's degree
- Silver Award Winner (Leader) in IoT Design Project
- Served as a facilitator at Universiti Malaysia Perlis programs and student activities.
- Facilitator for Rover Scout programs, led team activities, and handled participant coordination.
- Full-Stack Web Development Bootcamp
